Research Area: 1.4 Biological Oceanography

PhD project: Free-living marine nematodes from soft substrates of intertidal zones of the coast of Galicia (NW Iberian Peninsula)

Supervisors: Dr. M^a Celia Besteiro Rodríguez (University of Santiago de Compostela)

Summary: The project will consist on the study of the samples of free-living marine nematodes which proceed from the GI-1275 Biodiversity and marine resources' collection, following a methodology of study using the stereomicroscope and optical microscope, the proper fixation technics and the specific bibliography in order to identify these specimens. So we can accomplish the goals of recognition to the anatomical characteristics with taxonomic interest. Also, we will study the substrate and the distribution where they were collected.
