University of Vigo  
Nationality: Spanish

Orientation: Sustainable Use of Marine Resources  
Specialization Area: Aquaculture  
Research Area: 2.8 Marine ecology and cultures

PhD project: **Biobanking of parasites in aquaculture and fisheries production systems**

Supervisors: Dr. Santiago Pascual del Hierro (Marine Research Institute-CSIC)  
Dr. Ángel F. González González (Marine Research Institute-CSIC)

Summary: This Project is intended to design, develop, implement and perform a proof-of-concept about biobanking procedures in parasite samples from commercial lots of wild and aquaculture fish in a European Community context.

Architecture and detail of procedures and technical protocols will be undertaken in the pursuit of an application for studies about risk analysis with zoonotic parasites and/or with those associated to commercial value worsening.
